DETAILED ACTION

Specification

1. The disclosure is objected to because of the following informalities: Page 3 lines 7, 8, 14 refer to "micro-lens array". It is believed that this should read -- micro-mirror array -- since there are no lens arrays present.

Appropriate correction is required.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 4-7, 8-9, 11 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The specification fails to adequately set forth what constitutes red blue and green micromirrors. There are no filter structures described which would allow for the reflection in a color mode.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 2851

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1-2, 8-9, 11 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Yang.

Yang discloses a DMD image projection device comprising:

a light source (10);

a micro-mirror unit (220, 250) having a plurality of deflectable micromirrors switchable between on and off states where one state reaches a projection lens and the other does not. The use of the three colors allows for 8 states of projection.

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claims 3-7, 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yang in view of Hornbeck (5,583,688)

Hornbeck (5,583,688) teaches a known structure of a DMD device including a metal oxide semiconductor layer (316), a metal layer (308), a torsion layer (304) and a silicon substrate (318) and address electrodes (314) formed on the layers. Pulse width modulation is also provided (Column 7 Line 2)

It would have been obvious to one skilled in the art to modify the optical arrangement of Yang for use with any of a number of known types of deformable mirror

devices such as the one shown by Hornbeck because such modification is simply the substitution of one type of modulator for another.
